Universal Seat
for Construction Machines

ISRI® 6500 KM/577
ISRI® 6500/577

Pneumatic suspension
ISRI® driver's seat
Proven standards
for safety and comfort

The ISRI® 6500/577 is a comfort driver's seat for construction machines. It is of extraordinary quality and extremely robust. Depending on the vehicle category, the pneumatic suspension system can be delivered in different versions according to EN/ISO 7096:2000. The additional reinforcements within the seat make the ISRI® 6500/577 compliant with all current DIN and EN safety requirements. The variety of individually adjustable features, complement the standard height and inclination adjustment system. These features work in relation with the anatomically formed seat and backrest cushions to minimise driver fatigue. All seats are equipped with extremely durable and robust upholstery. For vehicles without any air pressure supply, we offer the same product but with an integrated air compressor as model ISRI® 6500/577KM.

STANDARD FITTING

- With integrated compressor (version KM)
- Weight adjustment, infinitely up to 130 kg
